

Mitsubishi's vast line-up of laser processing machines include highly productive, universal and versatile types.

We provide a wide range of laser processing machines from world-class high-power lasers to viable alternatives to traditional punch presses. We design and manufacture every critical component that goes into our laser system from the cutting machine to resonator and control unit. As a premier comprehensive electrical machinery manufacturer, Mitsubishi Electric is committed to providing the best quality products.

## **NX series**

Mitsubishi's ever-evolving, user-friendly flagship laser, the NX series, provides unparalleled speed and accuracy allowing for stable and reliable continuous operation.

## **NX-F series**

High-Speed, Ecology, High-Quality. The fiber laser oscillator dramatically shortend the processing time. Moreover, it achieved an environment-conscious and high-quality processing.

## **eX series**

The three "e's" of the new eX series -  
excellent, easy to use, ecology

User and environmentally friendly, high-speed, high-performance laser processing machine.

## **HVII series**

Mitsubishi's best-selling laser machine offers significantly shorter processing times while providing exceptional performance, stability and usability.

## **HVIIP series**

HVIIP offers easier setup, drastically enhanced productivity and efficiency. Comes with a pallet changer that ensures the full potential of HVII.
