

Boosts productivity and responds specifically to user needs.

Offers the ability to respond specifically to user needs. Mitsubishi's stocker systems optimize the laser system's production efficiency and allow for zero-micro-joint processing.

PC-LIV series for LV Series

Pallet changer/stocker

Automated stocker system provides a large storage capacity and allows for continuous operation. Laterally extended, according to available floor space.

PC-SIV series for LV Series

Pallet changer/stocker

Automated stocker system provides a large storage capacity and allows for continuous operation. Longitudinally extended, according to available floor space.

PC-LHVII series for HVII Series

Pallet changer/stocker

Automated stocker system provides a large storage capacity and allows for continuous operation. Extended laterally to HVII series.

PC-LNX series for NX Series

Pallet changer/stocker

Automated stocker system provides a large storage capacity and allows for continuous operation. Extended laterally to NX series.

SCXIV-P-M series for LV Series

Pallet/sheet changer

A dual-purpose material handling system which exchanges pallets when cutting medium to thick workpieces and loads/unloads thin sheets in high-volume production runs.

SCXHVII-P-M series for HVII Series

Pallet/sheet changer

A dual-purpose material handling system which exchanges pallets when cutting medium to thick workpieces and loads/unloads thin sheets in high-volume production runs.
