

What makes this competitively priced basic shear unique is its innovative hybrid drive. The robust hydraulics is controlled by sophisticated electronics. The SafanDarley B-Shear uses much less oil than hydraulic shears. The servo-electronic motor runs only when the cutting beam moves, which results in considerable energy savings. It also produces a low-noise cutting cycle.

The SafanDarley B-Shear offers the same superior cutting technique as the SafanDarley M-Shear, but only in a single basic model with more limited accessories and fewer optional features.

- SafanDarley B-Shear 310-6
- Cutting capacity: sheet thickness 6 mm, cutting length 3100 mm
- Drive with servo-electronic motor and hydraulic pump
- Oil tank only 22 litres
- SafanDarley TS200 touch screen control, features include CNC programming of cutting programmes
- Fully automatic setting of cutting angle and stroke length
- Torsion-free cutting of narrow strips
- CNC-controlled backgauge.
- Comes standard with pneumatic sheet-holding device
- Safety provisions in accordance with European Machinery Directive
